EXPLANATORY NOTE

This Amendment No. 1 to the Annual Report on Form 20-F for the fiscal year ended December 31, 2017 of Enel Chile S.A. (the “Company”) filed with the Securities and Exchange Commission on April 27, 2018 (the “Form 20-F”) is being filed by the Company in order to (i) amend Part I, Item 11 of the Form 20-F, solely for the purpose of correcting (a) the first table under the heading “Interest Rate and Foreign Currency Risk” to include the fair value information that was inadvertently omitted, (b) the second table under the heading “Interest Rate and Foreign Currency Risk” to revise information regarding weighted average interest of US\$ fixed rate debt, the value of Ch\$/UF variable rate debt, as well as related total amounts and its fair value, and (c) the first table under the heading “Foreign Currency Risk” to include fair value information that was inadvertently omitted, and (ii) furnish the interactive data files formatted in XBRL (eXtensible Business Reporting Language) as Exhibit 101 to the Form 20-F in accordance with Rule 405 of Regulation S-T.

No other changes have been made to the Form 20-F. This Amendment No. 1 to the Form 20-F speaks as of the original filing date of the Form 20-F, does not reflect events that may have occurred subsequent to the original filing date, and does not modify or update in any way disclosures made in the original Form 20-F.

Pursuant to Rule 406T of Regulation S-T, the interactive data files furnished as Exhibit 101 hereto are deemed not filed or part of a registration statement or prospectus for purposes of Sections 11 or 12 of the Securities Act of 1933, as amended, and otherwise are not subject to liability under those sections.

Item 11. Quantitative and Qualitative Disclosures About Market Risk

We are exposed to risks arising from changes in commodity prices, interest rates and foreign exchange rates that affect the generation and distribution businesses in Chile. These risks are monitored and managed by us in coordination with Enel Generación. Our Board of Directors approves risk management policies at all levels.

Commodity Price Risk

In our electricity generation business segment, we are exposed to market risks arising from the price volatility of electricity, natural gas, diesel oil, and coal. We seek to ensure our fuel supply by securing long-term contracts with our suppliers for periods that are expected to match the lifetime of our generation assets. These contracts generally have provisions that allow us to purchase natural gas with a pricing formula that combines Henry Hub natural gas and Brent diesel oil at market prices prevailing at the time the purchase occurs. As of December 31, 2017, we held contracts classified as derivative financial instruments related to natural gas (2.3 million MMBTU of Henry Hub). As of December 31, 2016 we held contracts classified as derivative financial instruments related to diesel oil (2.9 million barrels of Brent diesel oil) and natural gas (3.3 million MMBTU of Henry Hub).

In our thermal power plants, which use coal or petroleum-based liquid fuel, the dispatch or bidding mechanism allows these plants to cover their operating costs. However, under certain circumstances, fuel price fluctuations might affect marginal costs. In most cases, we transfer commodity prices variations to contracted sale prices according to indexing formulas. Due to the drought conditions in the past several years in Chile and the price volatility of coal, we hedged this risk with commodity instruments available in the international markets.

Additionally, through adequate commercial risk mitigation policies, and a hydro-thermal power plant mix, we seek to naturally protect our operating income from electricity price volatility. As of December 31, 2017 and 2016, we did not hold electricity price-sensitive instruments.

We are continually analyzing strategies to hedge commodity price risk, like transferring commodity price variations to the customers' contract prices and/or permanently adjusting commodity indexed price formulas for new Power Purchase Agreements according to our exposure and/or analyzing ways to mitigate risk through hydrological insurance in dry years. In the future we may use price-sensitive instruments.

(2) As of December 31, 2016, fair value was calculated based on the discounted value of future cash flows expected to be paid (or received), considering current discount rates that reflect the different risks involved.

Interest Rate Risk

Our policy aims to minimize the average cost of debt and reduce the volatility of our financial results. Depending on our estimates and the debt structure, we sometimes manage interest rate risk through the use of interest rate derivatives.

At both December 31, 2017 and 2016, 92% of our total outstanding debt was denominated in fixed terms and 8% was subject to variable interest rates. Because the exposure to variable interest rate risk was so low, we did not engage in derivative hedging instruments.

Foreign Currency Risk

Our policy seeks to maintain a balance between the currency in which cash flows are indexed and the currency of the debt of each company. Most of our subsidiaries have access to funding in the same currency as their revenues, therefore reducing the exchange rate volatility impact. In some cases, we cannot fully benefit from this, and therefore, we try to manage the exposure with financial derivatives such as cross currency swaps or currency forwards, among others. However, this may not always be possible under reasonable terms due to market conditions.

As of December 31, 2017, the carrying values for financial accounting purposes and the corresponding fair value of the instruments that hedge the foreign exchange risk of our interest bearing debt were as follows:

For the year ended December 31,	Expected Maturity Date						Total	Fair Value ⁽²⁾
